16S DIY Battery Kit

AE-E-BUILD-16S

Build a low-voltage LiFePO4 storage system with a clearly defined package: case kit without cells, or a kit with matched cells for professional assembly. Final component list and electrical limits are agreed per quotation.

Design illustration; final component list and specifications are agreed for the selected configuration.

TECHNICAL INFORMATION

Proposed configuration

Supply format	Case kit: no cells. Cell-kit option: 16 compatible cells, assembly required.
Cell arrangement	16S1P
Proposed nominal voltage	51.2 V (16 × 3.2 V)
Cell-kit / assembled option	314 Ah
Calculated nominal energy with 314Ah cells	16.0768 kWh (51.2 V × 314 Ah)
BMS selection	16S LiFePO4; current rating and firmware by final BOM
Continuous charge / discharge	Confirm for the quoted configuration
Protection rating / location	IP rating unverified; plan a dry indoor installation
Cycle life / warranty	Confirm for the quoted configuration
System role	DC battery storage; external inverter required for AC loads
Case-kit energy	No stored energy without cells

Pre-assembled 16kWh Battery

AE-E-READY-16

A proposed factory-assembled LiFePO4 battery for residential solar storage and backup through a matched external inverter. Cells are fitted within the enclosure; commissioning, inverter settings and installation remain project-specific.

Design illustration; final component list and specifications are agreed for the selected configuration.

TECHNICAL INFORMATION

Proposed configuration

Supply format	Cells installed in enclosure; no inverter included; commissioning required.
Cell arrangement	16S1P
Proposed nominal voltage	51.2 V (16 × 3.2 V)
Cell-kit / assembled option	314 Ah
Calculated nominal energy with 314Ah cells	16.0768 kWh (51.2 V × 314 Ah)
BMS selection	16S LiFePO4; current rating and firmware by final BOM
Continuous charge / discharge	Confirm for the quoted configuration
Protection rating / location	IP rating unverified; plan a dry indoor installation
Cycle life / warranty	Confirm for the quoted configuration
System role	DC battery storage; external inverter required for AC loads
